

RetailMind AI

Unified Decision Intelligence Platform for Bharat Commerce

A multi-agent business copilot converting fragmented
data into autonomous action.

Team: AT-On The Go....

Leader: Akshat Tripathi

Problem Statement:

PROFESSIONAL TRACK : AI for Retail, Commerce & Market Intelligence

Build an AI-powered solution that enhances decision-making, efficiency, or user experience across retail, commerce, and marketplace ecosystems.

The Problem: Drowning in Data, Starved for Action.

Retailers and marketplaces in India face 'Data Overload.' Human operators manually filter signals from fragmented sources, leading to bottlenecks.

-  **The Gap:** Current tools are static. They Analyze Data → Show Dashboard → Wait for Humans.
-  **The Result:** Slow decisions, missed regional trends, and high error rates.
-  **The Consequence:** Inability to handle the scale and diversity of the Bharat market.

RetailMind AI: The Multi-Agent Business Copilot

From static analysis to self-regenerating decision intelligence.

- ✓ Real-time decisions: Pricing, Demand, Inventory, Risk.
- ✓ Unified ecosystem view.
- ✓ Target Audience: MSMEs (Kiranias) to Enterprise Marketplaces.

Moving from Static Analytics to Agentic Intelligence

Traditional Platforms	RetailMind AI
Analyze data	Detects issues
Show Dashboards	Resolves autonomously
Require human intervention	Regenerates workflows dynamically
Static Workflows	Learns from outcomes

Key Insight: This is Agentic AI + Business Intelligence.

The Core Mechanism: A Continuous Intelligence Loop

Layers 1 & 2: Observe and Analyze

1. Observe (The Eyes)

Ingests live streams via Amazon Kinesis, S3 (Raw Data), and DynamoDB (Transactions).

AWS Mechanism: Kinesis | S3 | DynamoDB

2. Analyze (The Brains)

Specialized agents analyze data through specific business lenses using Amazon Bedrock and SageMaker.

AWS Mechanism: Bedrock | SageMaker | Q

Meet the AI Council: Specialized Agents Working in Concert

A digital Board of Directors for Commerce.

Layer 3: The Decision Matrix

Orchestrated by AWS Step Functions and Bedrock Agents to balance speed with trust.

Layer 4: Autonomous Execution & Workflow Regeneration

Core Differentiator:

The system doesn't just run workflows; it builds and modifies them dynamically.

Triggers:

- Sudden demand spikes
- Pricing anomalies
- New compliance rules

aws

AWS Mechanism:

AWS
Lambda

+

Functions

Layer 5: The Self-Learning Feedback Loop

The system identifies which workflows succeeded and which failed, preventing repeated mistakes.

Real-World Scenario: “Why did revenue drop?”

Technical Architecture on AWS

Development Strategy: Intelligence by Design

Powered by **Kiro**
Elite-Level Usage:
Using AI to build AI

```
define council_behaviors({  
  councils: 'AI counctrs ...',  
  behavior: 'policy settings',  
  behaviors: 'amplement rules'  
});
```

```
specify_escalation_policies({  
  trigger: 'high_risk',  
  action: 'alert_team'  
});
```

```
generate_ui_scaffolding({  
  view: 'analytics_dashboard'  
});
```

Advantage: Translates business intent into executable AI workflows instantly.

Built for the Complexity of Bharat Commerce

“RetailMind AI: Converting fragmented data into autonomous business success.”

Thank You.
